

1. N/A
2. I added a blank print statement to each main method in TimeConversion.java so that there would be a space between each calculation once the program runs. This makes it easier to read.
3. N/A
4. I would say that the most challenging part of this assignment was figuring out what all the terminology meant in this context (arguments and methods. I have gotten fairly proficient with the coding that we have done in class but I still struggle to remember what the different vocabulary means sometimes. Once I figured out what I was being asked to do, it was very easy from there.
